# Conservation Tree Program for 2020 in the Lewis & Clark NRD

# Conservation Trees are Working Trees

## Things to Remember:

Windbreak design cost share is available through your local NRCS offices. Landowners are responsible for site preparation including flagging, disking, roto-tilling, ripping, or chiseling. If the site is in any kind of sod, roto-tilling is required for planting.

Expect to pay for the trees and weed barrier at the time a tree plan is drawn up. Tree planting services will be billed after the trees are installed. Weed barrier installation will be billed by private contractor.

Cost share may be available. Contact NRCS for applications prior to work. Receipts are required for all reimbursements.

**LCNRD will send a letter to inform all machine planting cooperators of the planting start date. The letter will be final notice to have the site ready. Go Back Charge is \$3.00/mile round trip.**

If the landowner is purchasing weed barrier the landowner will need to line up a **Weed Barrier Installer** (see back for list). Tillage strips 8'-10' wide are needed for proper installation.

## For Descriptions and Pictures

go to: <http://www.nrdtrees.org>
